

Achieve Business Mobility with Hyper-Converged Infrastructure

F5 and Nutanix offerings

- BIG-IP® Access Policy Manager®
- BIG-IP® Local Traffic Manager™
- BIG-IP® DNS
- Nutanix Xtreme Computing Platform
- Nutanix Acropolis
- Nutanix Prism

Organizations are looking to deliver business mobility solutions through application and desktop virtualization, mobile device management, and dynamic content collaboration to support their mobile workforce. As a result, many of those organizations are adopting Nutanix to simplify their IT environment and deliver their critical applications and services. By combining servers, storage, and management in a turnkey hyper-converged appliance, Nutanix allows organizations to support any virtualized environment—without the inefficiencies of overprovisioning or complexity of separate networked storage.

The F5® BIG-IP® system helps ensure fast, secure, and consistent access to the applications and desktops being deployed on Nutanix systems. BIG-IP products work seamlessly with the major business mobility solutions to help organizations realize the benefits of hyper-converged infrastructure—while ensuring application security, availability, performance, and scale.

Improve User Experience and Decrease Costs with Nutanix

The Nutanix hyper-converged solution consolidates critical infrastructure elements into a single software-defined appliance that supports mobile devices and applications such as VMware Horizon, Microsoft RDP, Citrix XenDesktop, and Citrix XenApp. The Nutanix solution eliminates storage and scalability bottlenecks, boosting application performance and delivering a consistent, excellent user experience.

Organizations can get up and running within an hour, while predictable linear performance provides pay-as-you-grow scaling without service disruptions and helps avoid costly overprovisioning. By implementing a business mobility solution using scalable Nutanix invisible infrastructure, organizations can lower CapEx, simplify management, and increase overall IT agility.

Optimize Your Business Mobility Solution with the F5 BIG-IP System

To successfully deploy a business mobility solution using hyper-converged Nutanix invisible infrastructure, organizations must ensure that they can continue to deliver mission-critical application services, keep their desktops and applications highly secure, and provide access to users—anywhere, anytime, and from any device.

BIG-IP Access Policy Manager (APM) gives users unified, secure access to applications, while F5 application optimization and availability services offer intelligent local and global traffic management for virtual desktop and application deployments. In addition, BIG-IP virtual editions deliver next-level agility and flexibility, making it easy for organizations to spin up applications in minutes, automate deployment and configuration, and seamlessly move application delivery services between virtual, cloud, and hybrid environments.

Achieve business mobility with hyper-converged infrastructure.
