

The F5 and Nutanix Partnership

By implementing F5 and Nutanix solutions, organizations can realize the benefits of a web-scale architecture without sacrificing application availability, performance, and security. When enterprises bring together the Nutanix turnkey hyper-converged solution with the application delivery services of the F5® BIG-IP® system, they can achieve cloud-like agility and scalability, with the security and stability of on-premises solutions.

Application Delivery Services in a Hyper-Converged Infrastructure

The Nutanix solution integrates compute, storage, and virtualization into a single, easy-to-scale appliance to support any virtualized environment—without the inefficiencies of overprovisioning. As organizations deploy applications on the Nutanix hyper-converged infrastructure, they must still ensure fast, secure, and consistent access to the applications and desktops. The BIG-IP system works seamlessly with the leading business mobility applications—including VMware Horizon, Microsoft RDP, Citrix XenDesktop, and Citrix XenApp—to ensure that enterprises can deliver mission-critical application services, keep desktops and applications highly secure, and provide anywhere, anytime access to users from any device. With F5 and Nutanix, organizations can lower CapEx and OpEx, simplify management, and increase overall IT agility while providing the security and performance users expect.

Key benefits

- Improve productivity
- Increase agility
- Get all-in-one security
- Achieve faster ROI with lower CapEx and OpEx
- Ensure application availability

Nutanix and F5 Deliver Next-Level Business Mobility Solutions

These solutions help organizations:

Improve productivity

Hyper-converged Nutanix infrastructure eliminates storage bottlenecks, boosting application performance and enhancing user experience, while linear scaling allows growth without service disruptions or costly overprovisioning.

Increase agility

BIG-IP virtual editions allow enterprises to spin up applications in minutes, automate deployment and configuration, and seamlessly move application delivery services between virtual, cloud, and hybrid environments.

Get all-in-one security

The BIG-IP threat-mitigation platform protects against attacks, secures and differentiates access to critical applications, and delivers industry-leading SSL performance.

Achieve faster ROI

Deliver faster ROI with lower CapEx and OpEx by maximizing efficiency and utilization for virtualized applications.

Ensure application availability

BIG-IP application delivery services offer intelligent local and global traffic management, increasing availability for virtual desktop and application deployments using the Nutanix hyper-converged platform.
